AI FAQ ASSISTANT - PROJECT REPORT

Phase 1: Brainstorming & Ideation Phase

Project Overview

AI FAQ Assistant is a secure REST API that helps support teams build, organise and search a knowledge base without writing every answer by hand.

Problem Statement

Support teams face challenges in maintaining documentation, drafting detailed answers, tracking searches, and managing access control. This project aims to solve these problems through an AI-assisted FAQ system.

Objectives

- Let Google Gemini draft a question, answer and category from a topic
- Provide real-time keyword search over FAQs
- Allow only the author to edit or delete a record
- Organise all FAQs into categories
- Provide a clean, modular and scalable backend

Key Features Conceptualized

- Secure access through JWT authentication
- AI FAQ generation using Google Gemini
- Keyword-based search functionality
- Full CRUD operations
- Category management
- Password encryption with bcrypt
- Validation and error handling
- Modular REST design
