AI FAQ ASSISTANT - PROJECT REPORT

Phase 6: Project Testing Phase

Testing Environment

• MongoDB running locally
• Server running on http://localhost:5000
• Testing tool: Postman/ThunderClient

Endpoints Tested

• /api/auth/register (POST, Public)
• /api/auth/login (POST, Public)
• /api/faqs (POST, Private)
• /api/faqs (GET, Public)
• /api/faqs/search (GET, Public)
• /api/ai/generate-faq (POST, Private)

Test Cases & Results

Test 1 - Register: 201 Created (142 ms)
Test 2 - Login: 200 OK (138 ms)
Test 3 - Create FAQ: 201 Created (79 ms)
Test 4 - Fetch FAQ: 200 OK (25 ms)
Test 5 - Generate FAQ with AI: 200 OK (5.80 s)

Performance Observations

• Database-backed endpoints: <150 ms
• AI endpoints: ~5.8 seconds (external service)
• All protected routes properly reject unauthorized requests
• Consistent JSON response format across all endpoints

Error Scenarios Tested

• Missing/Invalid token: 401 Unauthorized
• Duplicate email: 400 Bad Request
• Invalid category: 400 Bad Request
• Malformed ID: 404 Not Found
• Proper error messages returned for all scenarios

Sample Successful Responses

All endpoints return standardized JSON format:
{ 'success': true/false, 'message': '...', 'data': {...} }
