AI FAQ ASSISTANT - PROJECT REPORT

Phase 8: Project Demonstration Phase

Project Conclusion

AI FAQ Assistant successfully demonstrates how a well-structured Node.js backend can automate knowledge base management using modern technologies and AI integration.

Key Achievements

• Secure REST API with JWT authentication
• AI-powered FAQ generation using Google Gemini
• Real-time keyword search functionality
• Robust error handling and validation
• Modular, scalable architecture
• Comprehensive testing coverage

System Limitations

• Keyword search (not semantic)
• No admin dashboard
• Rate limiting not implemented
• No front-end interface in current version
• AI integration requires internet and API key

Future Scope

• Implement role-based access (Admin, Editor)
• Add semantic (AI-based) search
• Implement likes and feedback features
• Build web front-end
• Add rate limiting for AI endpoints
• Category management endpoints

Demonstration Materials

• API Testing Video: Live endpoint demonstrations
• Demo Video: Complete system walkthrough
• Postman Collection: All API endpoints
• Test Results: Performance metrics and test outcomes

Team Information

Team Leader: Gopinath.S
Team Members: Ganesh Rana.N, Kishore.M, Vishal.R
Guided By: Dr. S. Kalaiselvi
SPOC: Dr. K. Lalithakameswari
Institution: K.C.S. Kasi Nadar College of Arts & Science
Department: Computer Applications
Program: BCA - Semester V
